EXPERIENCE

Chamber (formerly dHEDGE)

DeFi asset-management protocol (non-custodial investment vehicles for portfolio managers, AI trading agents, and investors)

Senior Product Manager — Jan 2024 – Apr 2026

- Attracted **~$110M** of Chamber's $125M+ assets under management by launching Toros leverage products as a brand on the platform, working with a team of 10 engineers and designers using first-principles PRDs and Figma wireframes.
- Grew monthly revenue **~7x** to $3.4M annualized by closing a competitive fee gap: benchmarked competitor fee structures from public market data and worked with engineering to add redemption fees to the products.
- Grew Toros' weekly active users **9.5x** (600 to 5,700) by building referral, leaderboard, and achievements systems around user motivations and incentives, with staged rollouts tracked in Google Analytics and internal dashboards.
- Grew monthly active users **73%** by owning the Chamber rebrand and recruiting 10 organizations, including Coinbase's Base, Arbitrum, and Chainlink, to co-promote demos integrating them with Chamber's AI interface.
- Attracted **$3.5M** in day-one deposits for the relaunch of mStable, Chamber's savings brand, by automating a yield strategy which users were doing manually and securing co-promotion from the Ethereum Foundation, Ethena, and Aave.

Technical Product Manager — May 2021 – Dec 2023

- Attracted $1M in month one and **$6.5M** in deposits the next six months of the V2 platform launch by shaping the roadmap around user interview analysis and coordinating with engineering through GitHub PRs and Trello user stories.
- Led the first dHEDGE V2 launch on a second network which attracted over **$300K** within the first month by coordinating marketing initiatives of an in-app trading competition with engineering using Trello and Figma.

Senior Frontend Engineer — Jan 2021 – May 2021

- Cut users' network transaction fees up to **90%** on managed portfolio products by integrating a lower-fee oracle-based swap route into the React TypeScript trading UI, validated with end-to-end smoke tests.

Infosys (contracted to Starbucks)

Associate, promoted to Senior Associate — Nov 2019 – Dec 2020

- Fixed a logic-breaking edge case in Starbucks' in-house food-thaw app for sessions crossing midnight by refactoring the screen-routing logic using browser events in React, and testing using Jest unit tests and smoke tests.

Freelance

Frontend Engineer — Jun 2018 – Nov 2019

- Shipped apps and smart contract integrations across five crypto startups, from a trading app built from scratch to new margin-trading liquidity routes and a cryptographically secured paywall, by using Web3 libraries, React, and React Native.

PROJECTS

Independent

AI Consumer Products — May 2026 – Present

- Built Grava, an AI calorie app, with a **21.13%** conversion rate on the App Store, top quartile among free Health & Fitness apps, by using Claude Code to launch four apps, including Cleared and IronProof, to test the market and product-market fit.
- Held Grava's AI costs **under 25¢** per user per month while offering honest calorie ranges by compressing photos, using Gemini API with fallback to on-device Apple Intelligence, and logging repeating items without re-calling the model.

SKILLS

Product Roadmapping, first-principles product design, user research, PRD, backlog grooming, pricing, go-to-market
AI AI coding (Claude Code), prompt engineering, MCP servers, Gemini API, Apple Intelligence, TypeSafe Jev
Marketing Copywriting, positioning, social media, launch strategy, campaign design, partnerships
Engineering & Data React, React Native, TypeScript, Node.js, Python, SQL, Google Analytics, Dune, Figma, Notion
Languages English, Spanish (fluent)

EDUCATION

The Pennsylvania State University, B.S., Energy Engineering — May 2019
