Experience

Chamber (formerly dHEDGE)

Consumer investing platform for automated portfolios; $125M+ peak assets under management

Senior Product Manager Jan 2024 – Apr 2026

- Attracted $125M+ in concurrent user deposits and $3.4M in annualized revenue by leading product across three brands on one platform with a team of 10 engineers and designers, and by refining product features and pricing.
- Helped launch Toros as its own brand by driving the spin-out idea and identifying its core features (stop losses, price alerts, achievements, leaderboard, referrals) from first-principles wireframes in Figma through design to ship.
- Grew monthly visitors 73% by owning the dHEDGE-to-Chamber rebrand (positioning, naming, launch), co-promoted by ecosystem foundations; drew $3.5M day-one deposits by owning the savings relaunch.
- Grew weekly returning users from 600 to 5,700 (+850%) by designing gamification and loss-aversion mechanics, shipped in staged rollouts and measured before and after in Google Analytics and internal dashboards.
- Opened the platform to AI-managed portfolios by leading the strategy and build of an MCP server that lets portfolio managers direct trades through AI agents inside the platform's pre-existing contract-level guardrails.

Technical Product Manager May 2021 – Dec 2023

- Attracted $1M in the first month and $6.5M over the following six by owning the V2 platform launch, roadmap (Notion, Trello) through release; led its first launch on a second network to $300K in month one.

Senior Frontend Engineer Jan 2021 – May 2021

- Cut users' transaction fees 90% on pooled investment products by integrating a lower-fee swap route into the trading UI; enabled multi-signature accounts by making the frontend compatible with a multi-signature wallet.

Infosys (contracted to Starbucks)

Associate, promoted to Senior Associate Nov 2019 – Dec 2020

- Built the screen-routing logic in Starbucks' in-house food-thaw app (React / React Native) for sessions crossing midnight, an edge case senior and staff engineers met to walk through; delivered user stories in daily Scrum.

Freelance

Frontend Engineer Jun 2018 – Nov 2019

- Shipped margin-trading, bounty, paywall, and live-price apps for five startups by building in React, React Native, and Web3, from email-verified auth to leverage math.

Projects

Independent

AI Consumer Products, Solo Builder May 2026 – Present

- Shipped three consumer products solo in 2026 (Grava, Cleared, IronProof), all live on the Apple App Store with active users, by owning product, design, engineering, and go-to-market.
- Shipped Grava's calorie estimates as honest ranges biased toward the user's goal by running Gemini via Firebase AI Logic with graceful degradation to on-device Apple Intelligence when offline or over quota.
- Opened Cleared to Claude (claude.ai, Claude Code, any MCP client) by building and operating a remote MCP server, 18 tools over Streamable HTTP with OAuth 2.1 and PKCE; every AI write stays undoable in the app.

Skills

Product Roadmapping, user research, wireframing, go-to-market, pricing, staged rollouts, partnerships
AI Claude Code, MCP servers, prompt engineering, Gemini API, Apple Intelligence (Vision, on-device models)
Marketing Positioning, naming, launch strategy, copywriting, campaign design
Engineering & Data React, React Native, TypeScript, Node.js, Python, SQL, Google Analytics, Dune, Figma, Notion
Languages English (native), Spanish (fluent)

Education

The Pennsylvania State University, B.S., Energy Engineering May 2019
